# EMERGENCY SHUT-OFF VALVE **3815**

Approved By :

## APPLICATIONS

These valves are used to stop the flow of gas in case of emergency, usually placed at the entrance of a building, or before the gas meters, for example.

These valves are required in the piping system to all types of appliances (gas stove, gas heater, gas water boiler etc..)

## ADVANTAGES

Available with different types of threads allowing you to easily connect the valves on all types of piping in the gas installation.

## STOP CONSEIL (Handy tips)

To arm the 3815 ESV valve : use a P530 or P531 key by inserting the smooth end in the hole situated under the hood and pushing down, as shown in the drawing, until you feel the "click"

## STOP INFO (Other information)

The CLESSE ESV is the only product of this type available on the market which can be repaired without having to close the gas flow thanks to the special repair kit (P381515/P381525)

EMERGENCY SHUT OFF VALVE delivered with re-arm key P530
